Some have said that if God had wanted us to fly, He would have given us wings. And yet, we were given the ability to dream, to think with our heads, to have courage in our hearts, and to build with our hands. Truly, we have been given

everything we need: We really can fly on our own wings! Chris Heintz is a professional aeronautical engineer with a prolific career spanning over 40 years designing and building light aircraft. Recognized worldwide as a uniquely talented and accomplished designer, his aircraft are known and appreciated for their simplicity of construction, pilot-friendly cabins and controllability as well as remarkable performances. Today, Chris Heintz designs are flown throughout the world, mostly by recreational pilots who have assembled their own planes from a kit. His most popular models are also factory-assembled and sold as ready-to-fly sport aircraft on three continents. In **ON YOUR OWN WINGS**, Mr. Heintz shares his knowledge and insights into the art and science of light aircraft design. He “walks” readers through the essential understanding and skills required to conceive, develop, build and even test-fly their own personal light airplane. Basic mathematics, essential aerodynamics and stress analysis are just a few of the chapters of this fascinating book. Heintz even provides a sample design to help would-be designers take their first step towards imagining and creating their own wings. Truly a beginner’s guide to everything you need to know in order to achieve that age-old dream: To fly on your own wings!

I have physical scars from past surgeries, however, I have emotional scars as well. They were buried deep inside (hidden). It wasn't until my mother died was I able to "catch my breath" and to make sense of or process the emotional pain I had endured due to her prescription drug addiction, resulting in my own addictions.

America, Incorporated Women have a long history of keeping the lights burning, from tending ancient altar flames or bonfires to modern-day lighthouse keeping. Yet most of their stories are little-known. Guiding

Lights includes true stories from around the world, chronicling the lives of the extraordinary women who mind the world ' s storm-battered towers. From Hannah Sutton and her partner Grant, the two caretakers living alone on Tasmania ' s wild Maatsuyker Island, to Karen Zacharuk, the keeper in charge of Cape Beale on Canada ' s Vancouver Island, where bears, cougars and wolves roam, the lives of lighthouse women are not for the faint of heart. Stunning photographs from throughout history accompany accounts of the dramatic

torching of Puysegur Point, one of NZ 's most inhospitable lighthouses; ' haunted ' lighthouses in across the US and their tragic tales; lighthouse accidents and emergencies around the world; and two of the world ' s most legendary lighthouse women: Ida Lewis (US) and Grace Darling (UK), who risked their lives to save others. The book also explores our dual perception of lighthouses: are they comforting and romantic beacons symbolizing hope and trust, or storm-lashed and forbidding towers with echoes of lonely, mad keepers?

Whatever our perception, stories of women ' s courage and dedication in minding the lights — then and now — continue to capture our imagination and inspire.

This engaging introduction to random processes provides students with

the critical tools needed to design and evaluate engineering systems that must operate reliably in uncertain environments. A brief review of probability theory and real analysis of deterministic functions sets the stage for understanding random processes, whilst the underlying measure theoretic notions are explained in an intuitive, straightforward style. Students will learn to manage the complexity of randomness through the use of simple classes of random processes, statistical means and correlations, asymptotic analysis, sampling, and effective algorithms. Key topics covered include:

- Calculus of random processes in linear systems
- Kalman and Wiener filtering

Hidden Markov models for statistical inference

- The estimation maximization (EM) algorithm
- An introduction to martingales and concentration inequalities.

Understanding of the key concepts is reinforced through over 100 worked examples and 300 thoroughly tested homework problems (half of which are solved in detail at the end of the book).
