Inventive, hilarious and joyously colorful, this fill-in journal was designed to help kids capture nearly everything that's uniquely rad about them. With design-savvy, yet completely kid-friendly illustrations, they're asked to draw or write about a bunch of interesting things

-- like what their hair looks like, what their band name would be, what they'd bring to outer space, and how they feel about lightning, lizards and pickles. There may or may not be a place for super-secret stuff inside the book jacket. Whether kids complete their entire compendium on a rainy day, or finish it over a year, it'll become a treasure to look back on and smile. Ideal for the holidays, rainy days and happy occasions of all kinds, this is an imagination-building gift will engage kids for hours on end

For undergraduate level courses in Cognition and

Theories of Learning. The psychology of human memory and cognition is fascinating, dealing with questions and ideas that are inherently interesting, such as how we think, reason, remember, and use language. Using a first person narrative, posing direct questions to the reader, and balancing classic research with cutting edge topics, the author draws in the reader and conveys the excitement of the field. Reflecting the increasing use of new technologies to study

memory and cognition, Ashcraft and the new co-author, Gabriel Radvansky, continue to integrate sections on neurosciences within individual chapter topics.

Linear algebra is something all
mathematics undergraduates
and many other students, in
subjects ranging from
engineering to economics,
have to learn. The fifth edition
of this hugely successful
textbook retains all the
qualities of earlier editions
while at the same time seeing
numerous minor
improvements and major
additions. The latter include: •
A new chapter on singular

values and singular vectors,
including ways to analyze a
matrix of data • A revised
chapter on computing in linear
algebra, with professional-level
algorithms and code that can
be downloaded for a variety of
languages • A new section on
linear algebra and
cryptography • A new chapter
on linear algebra in probability
and statistics. A dedicated and
active website also offers
solutions to exercises as well
as new exercises from many
different sources (e.g. practice
problems, exams, development
of textbook examples), plus
codes in MATLAB, Julia, and
Python.
