52 Weeks to Financial Fitness is your personal financial trainer -- a friendly and authoritative expert that will guide you week by week to manage your finances and make your money grow. In the current frenzied market it's hard to know whom to turn to for solid advice. Into this void steps the calm presence of Marshall Loeb, personal finance pioneer and former editor of two of the most successful magazines in history, *Fortune* and *Money*. Personal finance and investments are a lot like doing exercise. Few of us are happy with our finances or our physiques. For many people, just getting started on a fitness program is the hardest part. But once you begin, you marvel at how easy it is and wonder how you ever did without it. Marshall Loeb's program for financial fitness, like any good exercise program, starts simply and moves gradually to heavier lifting, boosting your confidence as you move forward. Not only will you learn how to budget your accounts and get your insurance in order, but you'll also have a strong enough background to choose the investments that are right for you (stocks, bonds, or mutual funds) and the know-how to pick a financial planner and get the most out of his or her services. No matter what kind of financial shape you're in, Marshall -- week by week -- carefully brings you to the next level. 52 Weeks to Financial Fitness tells you everything you need to know to become financially fit. With its comprehensive coverage and ease of use, the book will serve as your practical financial guide. Some examples: * Week 2: Ten ways to boost your savings. * Week 7: Design a realistic family budget with Marshall's three-stage method. * Week 11: Thirteen ways to cut your taxes this year. * Weeks 18 and 19: Get your debt under control and design a sensible borrowing plan. * Week 22: Start investing profitably in stocks. * Week 23: Look into investing in bonds. * Week 33: Cut the cost of your car insurance without cutting your coverage. * Week 46: Calculate and save what you will need to retire comfortably and without worry.

Computational Network Application Tools for Performance Management Springer Nature
This book explores a range of important theoretical and practical issues in the field of computational network application tools, while also presenting the latest advances and innovations using intelligent technology approaches. The main focus is on detecting and diagnosing complex application performance problems so that an optimal and expected level of system service can be attained and maintained. The book discusses challenging issues like enhancing system efficiency, performance, and assurance management, and blends the concept of system modeling and optimization techniques with soft computing, neural network, and sensor network approaches. In addition, it presents certain metrics and measurements that can be translated into business value. These metrics and measurements can also help to establish an empirical performance baseline for various applications, which can be used to identify changes in system performance. By presenting various intelligent technologies, the book provides readers with compact but insightful information on several broad and rapidly growing areas in the computation network application domain. The book 's twenty-two chapters examine and address current and future research topics in areas like neural networks, soft computing, nature-inspired computing, fuzzy logic and evolutionary computation, machine learning, smart security, and wireless networking, and cover a wide range of applications from pattern recognition and system modeling, to intelligent control problems and biomedical applications. The book was written to serve a broad readership, including engineers, computer scientists, management professionals, and mathematicians interested in studying tools and techniques for computational intelligence and applications for performance analysis. Featuring theoretical concepts and best practices in computational network applications, it will also be helpful for researchers, graduate and undergraduate students with an interest in the fields of soft computing, neural networks, machine learning, sensor networks, smart security, etc.

Give Me 10 Minutes, I'll Give You the Truth About Family Life Butterworth-Heinemann

Several new smartphones are released every year. Many people upgrade to new phones, and their old phones are not put to any further use. In this paper, we explore the feasibility of using such retired smartphones and their on-board sensors to build a home security system. We observe that door-related events such as opening and closing have unique vibration signatures when compared to many types of environmental vibrational noise. These events can be captured by the accelerometer of a smartphone when the phone is mounted on a wall near a door. The rotation of a

door can also be captured by the magnetometer of a smartphone when the phone is mounted on a door. We design machine learning and threshold-based methods to detect door opening events based on accelerometer and magnetometer data and build a prototype home security system that can detect door openings and notify the homeowner via email, SMS and phone calls upon break-in detection. To further augment our security system, we explore using the smartphone's built-in microphone to detect door and window openings across multiple doors and windows simultaneously. Experiments in a residential home show that the accelerometer-based detection can detect door open events with an accuracy higher than 98%, and magnetometer-based detection has 100% accuracy. By using the magnetometer method to automate the training phase of a neural network, we find that sound-based detection of door openings has an accuracy of 90% across multiple doors.

Intelligent Computing and Communication John Wiley & Sons

The Routledge Companion to Urban Media and Communication traces central debates within the burgeoning interdisciplinary research on mediated cities and urban communication. The

volume brings together diverse perspectives and global case studies to map key areas of research within media, cultural and urban studies, where a joint focus on communications and cities has made important innovations in how we understand urban space, technology, identity and community. Exploring the rise and growing complexity of urban media and communication as the next key theme for both urban and media studies, the book gathers and reviews fast-developing knowledge on specific emergent phenomena such as: reading the city as symbol and text; understanding urban infrastructures as media (and vice-versa); the rise of global cities; urban and suburban media cultures: newspapers, cinema, radio, television and the mobile phone; changing spaces and practices of urban consumption; the mediation of the neighbourhood, community and diaspora; the centrality of culture to urban regeneration; communicative responses to urban crises such as racism, poverty and pollution; the role of street art in the negotiation of 'the right to the city'; city competition and urban branding; outdoor advertising; moving image architecture; 'smart'/cyber urbanism; the emergence of Media City production spaces and clusters. Charting key debates and neglected connections between cities and media, this book challenges what we know about contemporary urban living and introduces innovative frameworks for understanding cities, media and their futures. As such, it will be an essential resource for students and scholars of media and communication studies, urban communication, urban sociology, urban planning and design, architecture, visual cultures, urban geography, art history, politics, cultural studies, anthropology and cultural policy studies, as well as those working with governmental agencies, cultural foundations and institutes, and policy think tanks.

This book shows you how to build and modify your own wifi camera based commercial quality portable wireless security, surveillance, and spy system appropriate for use at home, or during travel. This system uses only an Android cell phone or tablet (operating system 2.2 and above), a TI CC3200 Launchpad or ArduCAM CC3200 UNO, and a TI Camera Booster Pack with MT9D111 digital camera or just an ArduCAM MT9D111 digital camera if you are using an ArduCAM CC3200 Uno which has a built in camera interface. This book shows you how to build and modify your own alarm system that detects the motion of an intruder, calls out to an emergency phone number and sends emergency text messages using an Android cell phone or just alerts you to the intruder using an Android tablet. This alarm system is compact enough to also provide portable security for travelers using hotels and motels or you can use this as a hidden spy camera system. You can also use the security system for high quality continuous real time surveillance of your property. The live video feed is shown on the Android device. The camera can be set to only record pictures where there is movement so you can easily view any saved images to determine what kind of intruder was detected. The image data is stored locally on the Android device and does NOT require payment of storage fees as with some home security company plans. This book will also go into the technical details of the hardware set up as well as the author created Android and TI CC3200 SimpleLink software. With these technical details you will be able

to customize and expand these systems to suit your specific needs for your own personal use. This book also serves as a quick start guide for people interested in learning how to program wifi communication between an Android and a TI CC3200 Simplelink device. Who is this book for? This book for people that: * Want a quick start guide to wifi communication between an Android device and a TI CC3200 Simplelink device using a camera. * Travel often and need a low cost, no contract, portable security solution when living in motels and hotels. * Want to secretly monitor a wife, husband, girlfriend, boyfriend, employee, co-worker and/or other people or even animals without their knowledge and have real time notifications sent to your cell phone. Key Feature Summary: * Shows you how to build and modify your own portable wifi camera based commercial quality wireless home or portable security, surveillance, and spy system with real time emergency notification phone call out and text message notifications to your main cell phone. * The home security system presented in this book is easy to assemble and does not require the use of breadboards or soldering. * Follow the detailed "Hands on Example" and install the pre-made software created by the author on your Android and TI CC3200 SimpleLink devices and get a working commercial quality video surveillance system, or an intruder alarm system up and running quickly * This book explains the author created source code for the Android and TI CC3200 SimpleLink devices so you can customize the home security system yourself for your own specific needs for personal use. Table of Contents: Chapter 1: Introducing the ArduCAM CC3200 UNO Chapter 2: TI CC3200 SimpleLink Programming Language Basics Chapter 3: The Android Controller and Wifi Communication Chapter 4: The CC3200 and Wifi Communication Chapter 5: Motion Detection Using a Camera Chapter 6: The Android Wireless Security System Design Chapter 7: The CC3200 Simplelink Wireless Security System Design Chapter 8: Hands on Example: Building an Android and ArduCAM CC3200 UNO Security System Chapter 9: Deploying your GotchaCAM Wireless Intruder Alarm and Surveillance System *Step Forward Level 3 Workbook* Home Security System Diy Pro Using Android and Ti Cc3200 Simplelink Black Hat, Inc. is the premier, worldwide provider of security training, consulting, and conferences. The Black Hat Briefings held every year in Las Vegas, Washington DC, Amsterdam, and Singapore continually expose the greatest threats to cyber security and provide IT mind leaders with ground breaking defensive techniques. There are no books that show security and networking professionals how to protect physical security devices. This unique book provides step-by-step instructions for assessing the vulnerability of a security device such as a retina scanner, seeing how it might be compromised, and taking protective measures. The book covers the actual device as well as the software that runs it. By way of example, a thumbprint scanner that allows the thumbprint to remain on the glass from the last person could be bypassed by pressing a "gummy bear" piece of candy against the glass so that the scan works against the last thumbprint that was used on the device. This is a simple example of an attack against a physical authentication system. Charged with ensuring the confidentiality, integrity, availability, and delivery of all forms of an entity's information, Information Assurance (IA) professionals require a fundamental understanding of a wide range of specializations, including digital forensics, fraud examination, systems engineering, security risk management, privacy, and compliance. Establishing this understanding and keeping it up to date requires a resource with coverage as diverse as the field it covers. Filling this need, the Encyclopedia of Information Assurance presents an up-to-date collection of peer-reviewed articles and references written by authorities in their fields. From risk management and privacy to auditing and compliance, the encyclopedia's four volumes provide comprehensive coverage of the key topics related to information assurance. This complete IA resource: Supplies the understanding needed to help prevent the misuse of sensitive information Explains how to maintain the integrity of critical systems Details effective tools, techniques, and methods for protecting personal and corporate data against the latest threats Provides valuable examples, case studies, and discussions on how to address common and emerging IA challenges Placing the wisdom of leading researchers and practitioners at your fingertips, this authoritative reference provides the knowledge and insight needed to avoid common pitfalls and stay one step ahead of evolving threats. Security and Privacy in Communication Networks Springer
This book responds to the growing need to secure critical infrastructure by creating a starting place for new researchers in secure telecommunications networks. It is the first book to discuss securing current and next generation

telecommunications networks by the security community. The book not only discusses emerging threats and systems vulnerability, but also presents the open questions posed by network evolution and defense mechanisms. It is designed for professionals and researchers in telecommunications. The book is also recommended as a secondary text for graduate-level students in computer science and electrical engineering.

The Essential Guide to Overcoming Obsessive Love Springer Science & Business Media

In this paper, we describe the key lessons from an earlier HCI Educators' conference, held in Limerick in 2006, on 'inventivity' - a term coined to highlight the confluence of inventiveness and creativity. There is a distinction between being creative and being artistic. HCI education, in terms of creative inventiveness, is not just about artistically pleasing user interfaces, but also about solutions that are innovative. We can know much about creativity and inventiveness. However, to be able to teach and train students so that they can be creatively inventive, we believe that it would be helpful if educators themselves have personally experienced this. With this in mind, we organised the follow up conference HCIED 2007 Creativity: Experiencing to Educate and Design. Inventivity was coined to refer to the notion of inventing creative and innovative solutions. This term was also intended to mean that such solutions be more than 'creative', artistic or appealing interfaces as designed by artistic or 'creative types' of people. It was also intended to reflect the creativeness of the solutions that had to be invented. One reason for emphasising this aspect at the conference was that, in HCI design it is easy to misinterpret the focus of HCI design solutions - which should not address just visualisation and interaction design, but also address how that visualisation and interaction creatively represent and simplify the complexities in work that people engage in. *A Selection of ...
