The advances in low-power electronic devices integrated with wireless communication capabilities are one of recent areas of research in the field of Wireless Sensor Networks (WSNs). One of the major challenges in WSNs is uniform and least energy dissipation while increasing the lifetime of the network. This is the first book that introduces the energy efficient wireless sensor network techniques and protocols. The text covers the theoretical as well as the practical requirements to conduct and trigger new experiments and project ideas. The advanced techniques will help in industrial problem solving for energy-hungry wireless sensor network applications.

This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been customarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.

In a class of new police recruits, Augustus Plebesly is fast and scared. Roy Fehler is full of ideals. And Serge Duran is an ex-marine running away from his Chicano childhood. In a few weeks they'll put on the blue uniform of the LAPD. In the months to come, they'll learn that right and wrong aren't always clearly black and white. Bad guys populate both sides of the law. Rules are subject to interpretation. Justice is slow and convoluted. And life is not fair. But for these men, these new centurions, time is an enemy. The year is 1960. The streets are burning with rage. And before they can grow old on this job, they'll have to fight for their lives...

Killer Verse: Poems of Murder and Mayhem is a spine-tingling collection of terrifically creepy poems about the deadly art of murder. The villains and victims who populate these pages range from Cain and Abel and Bluebeard and his wives to Lizzie Borden, Jack the Ripper, and Mafia hit men. The literary forms they inhabit are just as varied, from the colorful melodramas of old Scottish ballads to the hard-boiled poetry of twentieth-century noir, from lighthearted comic riffs to profound poetic musings on murder. Robert Browning, Thomas Hardy, W. H. Auden, Stevie Smith, Mark Doty, Frank Bidart, Toi Derricotte, Lynn Emanuel, and Cornelius Eady are only a few of the many poets, old and new, whose work is captured in this heart-stopping—and criminally entertaining—collection.
